

MOON LANDING ANNIVERSARY

On July 21st, 1969, the astronauts of Apollo 11 stepped onto the lunar surface, completing one of humankind's greatest hours. As part of their mission kit, the astronauts were equipped with the OMEGA Speedmaster Professional, which in that moment, became the first watch worn on the moon. For this 54th anniversary, we pay tribute not only to that historic mission, but to all those who see possibility in the night sky.
